NAME

gettid − get thread identification

LIBRARY

Standard C library (*libc*, *−lc*)

SYNOPSIS

```
#define _GNU_SOURCE
#include <unistd.h>

pid_t gettid(void);
```

DESCRIPTION

gettid() returns the caller's thread ID (TID). In a single-threaded process, the thread ID is equal to the process ID (PID, as returned by **getpid**(2)). In a multithreaded process, all threads have the same PID, but each one has a unique TID. For further details, see the discussion of **CLONE_THREAD** in **clone**(2).

RETURN VALUE

On success, returns the thread ID of the calling thread.

ERRORS

This call is always successful.

VERSIONS

The **gettid**() system call first appeared in Linux 2.4.11. Library support was added in glibc 2.30. (Earlier glibc versions did not provide a wrapper for this system call, necessitating the use of **syscall**(2).)

STANDARDS

gettid() is Linux-specific and should not be used in programs that are intended to be portable.

NOTES

The thread ID returned by this call is not the same thing as a POSIX thread ID (i.e., the opaque value returned by **pthread_self**(3)).

In a new thread group created by a **clone**(2) call that does not specify the **CLONE_THREAD** flag (or, equivalently, a new process created by **fork**(2)), the new process is a thread group leader, and its thread group ID (the value returned by **getpid**(2)) is the same as its thread ID (the value returned by **gettid**()).
