

NAME

Mail::Message::TransferEnc::Binary – encode/decode binary message bodies

INHERITANCE

```
Mail::Message::TransferEnc::Binary
  is a Mail::Message::TransferEnc
  is a Mail::Reporter
```

SYNOPSIS

```
my Mail::Message $msg = ...;
my $decoded = $msg->decoded;
my $encoded = $msg->encode(transfer => 'binary');
```

DESCRIPTION

Encode or decode message bodies for binary transfer encoding. This is totally no encoding.

Extends “DESCRIPTION” in Mail::Message::TransferEnc.

METHODS

Extends “METHODS” in Mail::Message::TransferEnc.

DIAGNOSTICS

Error: Decoder for transfer encoding \$type does not work: \$@

Compiling the required transfer encoding resulted in errors, which means that the decoder can not be used.

Warning: No decoder for transfer encoding \$type.

A decoder for the specified type of transfer encoding is not implemented.

Error: Package \$package does not implement \$method.

Fatal error: the specific package (or one of its superclasses) does not implement this method where it should. This message means that some other related classes do implement this method however the class at hand does not. Probably you should investigate this and probably inform the author of the package.
