

NAME

PCRE2 - Perl-compatible regular expressions (revised API)

SYNOPSIS

```
#include <pcre2.h>

int pcre2_set_bsr(pcre2_compile_context *ccontext,
    uint32_t value);
```

DESCRIPTION

This function sets the convention for processing `\R` within a compile context. The second argument must be one of `PCRE2_BSR_ANYCRLF` or `PCRE2_BSR_UNICODE`. The result is zero for success or `PCRE2_ERROR_BADDATA` if the second argument is invalid.

There is a complete description of the PCRE2 native API in the **pcre2api** page and a description of the POSIX API in the **pcre2posix** page.
