

NAME

update-initramfs.conf – configuration file for update-initramfs

DESCRIPTION

The configuration file allows one to disable the update action from **update-initramfs**.

GENERAL VARIABLES**update_initramfs**

Default is *yes* for running the latest initramfs-tools hooks in the newest Linux image. Setting it to *all* updates any known initramfs. It is possible to set it to *no* for remote servers or boxes where conservative manners needs to be applied. This disables the **update_initramfs -u** call.

backup_initramfs

If set **update_initramfs** keeps an .bak file of the previous initramfs. If unset the backup initramfs will not be kept.

FILES

/etc/initramfs-tools/update-initramfs.conf

AUTHOR

The initramfs-tools are written by Maximilian Attems <maks@debian.org>, Jeff Bailey <jbailey@raspberrypi.com> and numerous others.
