

NAME

Date::Manip::TZ_Base – Methods common to the TZ and Base classes

SYNOPSIS

The Date::Manip::TZ_Base class is a second base class used for the following Date::Manip classes:

Date::Manip::Base

Date::Manip::TZ

This module is not intended to be called directly and performs no useful function by itself. Instead, use the various derived classes which inherit from it.

DESCRIPTION

This module contains no public methods and is used internally by the Base and TZ classes. In some instances, basic date operations depend on timezone information, and all timezone operations depend on the base class. In order to avoid a circular dependency, I created this class which allowed me to avoid that.

KNOWN BUGS

None known.

BUGS AND QUESTIONS

Please refer to the Date::Manip::Problems documentation for information on submitting bug reports or questions to the author.
