

NAME

Dpkg::Vendor::Ubuntu – Ubuntu vendor class

DESCRIPTION

This vendor class customizes the behaviour of dpkg scripts for Ubuntu specific behavior and policies.

PUBLIC FUNCTIONS

`$bugs = Dpkg::Vendor::Ubuntu::find_launchpad_closes($changes)`

Takes one string as argument and finds “LP: #123456, #654321” statements, which are references to bugs on Launchpad. Returns all closed bug numbers in an array reference.

CHANGES**Version 0.xx**

This is a semi-private module. Only documented functions are public.
