

NAME

mktemp – create a temporary file or directory

SYNOPSIS

mktemp [*OPTION*]... [*TEMPLATE*]

DESCRIPTION

Create a temporary file or directory, safely, and print its name. *TEMPLATE* must contain at least 3 consecutive 'X's in last component. If *TEMPLATE* is not specified, use tmp.XXXXXXXXXX, and **---tmpdir** is implied. Files are created u+rw, and directories u+rw, minus umask restrictions.

-d, ---directory

create a directory, not a file

-u, ---dry-run

do not create anything; merely print a name (unsafe)

-q, ---quiet

suppress diagnostics about file/dir-creation failure

---suffix=*SUFF*

append *SUFF* to *TEMPLATE*; *SUFF* must not contain a slash. This option is implied if *TEMPLATE* does not end in X

-p DIR, ---tmpdir[=*DIR*]

interpret *TEMPLATE* relative to *DIR*; if *DIR* is not specified, use \$TMPDIR if set, else /tmp. With this option, *TEMPLATE* must not be an absolute name; unlike with **-t**, *TEMPLATE* may contain slashes, but mktemp creates only the final component

-t

interpret *TEMPLATE* as a single file name component, relative to a directory: \$TMPDIR, if set; else the directory specified via **-p**; else /tmp [deprecated]

---help display this help and exit

---version

output version information and exit
