

**NAME**

**selinux\_policy\_root** – return the path of the SELinux policy files for this machine  
**selinux\_set\_policy\_root** – Set an alternate SELinux root path for the SELinux policy files for this machine.

**SYNOPSIS**

```
#include <selinux/selinux.h>
```

```
const char *selinux_policy_root(void);
```

```
int selinux_set_policy_root(const char *policypath);
```

**DESCRIPTION**

**selinux\_policy\_root()** reads the contents of the */etc/selinux/config* file to determine which policy files should be used for this machine. **selinux\_set\_policy\_root()** sets up all policy paths based on the alternate root

*/etc/selinux/config* file to determine which policy files should be used for this machine.

**RETURN VALUE**

On success, **selinux\_policy\_root** returns a directory path containing the SELinux policy files. On failure, **selinux\_policy\_root** returns NULL.

On success, **selinux\_set\_policy\_root** returns 0 on success -1 on failure.
