

**NAME**

**lz** – gunzips and shows a listing of a gzip'd tar'd archive

**SYNOPSIS**

**lz** *file*

**DESCRIPTION**

**lz** provides a listing of a gzip'd tar'd archive, that is a **tar**(1) archive compressed with the **gzip**(1) utility. It is not strictly necessary on Debian GNU/Linux, because the GNU **tar**(1) program provides the same capability with the command

**tar -tzf** *file*

but this utility is provided in the mtools package for other platforms and is retained here for completeness.

**AUTHOR**

Robert King (Robert.King@mailbox.gu.edu.au) wrote this page for the *Debian/GNU* mtools package.
