

NAME

selinux_boolean_sub – Search the translated name for a boolean_name record

SYNOPSIS

```
#include <selinux/selinux.h>
```

```
char *selinux_boolean_sub(const char *boolean_name);
```

DESCRIPTION

selinux_boolean_sub() searches the `/etc/selinux/{POLICYTYPE}/booleans.subs_dist` file for a matching `boolean_name` record. If the record exists the boolean substitution name is returned. If not **selinux_boolean_sub()** returns the original `boolean_name`.

RETURN VALUE

selinux_boolean_sub() returns the `boolean_name` or the substituted name on success. The returned value must be freed with **free(3)**. **selinux_boolean_sub()** returns NULL on error.
