

**NAME**

codepage – extract a codepage from an MSDOS codepage file

**SYNOPSIS**

**codepage** [ *-c* | *-l* | *-L* | *-a* | *nnn* ] *file.cpi*

**DESCRIPTION**

The **codepage** command extracts codepages from an MSDOS codepage file.

**OPTIONS**

- c*      Input file is a single codepage
- L*      Print header info (you don't want to see this).
- l*      List all codepages contained in the file.
- a*      Extract all codepages from the file
- nnn*    (3 digits): extract codepage *nnn* from the file.

**EXAMPLE**

To create a file 850.cp, with codepage 850 from a file ega.cpi, execute:  
codepage ega.cpi 850
