

NAME

ethers – Ethernet address to IP number database

DESCRIPTION

/etc/ethers contains 48 bit Ethernet addresses and their corresponding IP numbers, one line for each IP number:

Ethernet-address IP-number

The two items are separated by any number of SPACE and/or TAB characters. A # at the beginning of a line starts a comment which extends to the end of the line. The *Ethernet-address* is written as *x:x:x:x:x:x*, where *x* is a hexadecimal number between **0** and **ff** which represents one byte of the address, which is in network byte order (big-endian). The *IP-number* may be a hostname which can be resolved by DNS or a dot separated number.

EXAMPLES

08:00:20:00:61:CA pal

FILES

/etc/ethers
