

**NAME**

resize.f2fs – resize filesystem size

**SYNOPSIS**

**resize.f2fs** [ **-t** *target sectors* ] [ **-d** *debugging-level* ] *device*

**DESCRIPTION**

**resize.f2fs** is used to resize an f2fs file system (usually in a disk partition). *device* is the special file corresponding to the device (e.g. */dev/sdXX*).

Current version only supports expanding the prebuilt filesystem.

The exit code returned by **resize.f2fs** is 0 on success and -1 on failure.

**OPTIONS**

**-t** *target sectors*

Specify the size in sectors.

**-d** *debug-level*

Specify the level of debugging options. The default number is 0, which shows basic debugging messages.

**AUTHOR**

This version of **resize.f2fs** has been written by Jaegeuk Kim <jaegeuk@kernel.org>.

**AVAILABILITY**

**resize.f2fs** is available from [git://git.kernel.org/pub/scm/linux/kernel/git/jaegeuk/f2fs-tools.git](https://git.kernel.org/pub/scm/linux/kernel/git/jaegeuk/f2fs-tools.git).
