

**NAME**

mtrace – interpret the malloc trace log

**SYNOPSIS**

**mtrace** [*option*]... [*binary*] *mtracedata*

**DESCRIPTION**

**mtrace** is a Perl script used to interpret and provide human readable output of the trace log contained in the file *mtracedata*, whose contents were produced by **mtrace**(3). If *binary* is provided, the output of **mtrace** also contains the source file name with line number information for problem locations (assuming that *binary* was compiled with debugging information).

For more information about the **mtrace**(3) function and **mtrace** script usage, see **mtrace**(3).

**OPTIONS**

**--help** Print help and exit.

**--version**

Print version information and exit.

**BUGS**

For bug reporting instructions, please see: <http://www.gnu.org/software/libc/bugs.html>.
