

**NAME**

index.js – the npm tree doctor

**DESCRIPTION**

Arborist – the npm tree doctor

Version: 4.3.1

**# USAGE**

arborist <cmd> [path] [options...]

**# COMMANDS**

\* reify: reify ideal tree to node\_modules (install, update, rm, ...) \* prune: prune the ideal tree and reify (like npm prune) \* ideal: generate and print the ideal tree \* actual: read and print the actual tree in node\_modules \* virtual: read and print the virtual tree in the local shrinkwrap file \* shrinkwrap: load a local shrinkwrap and print its data \* audit: perform a security audit on project dependencies \* funding: query funding information in the local package tree. A second

positional argument after the path name can limit to a package name.

\* license: query license information in the local package tree. A second

positional argument after the path name can limit to a license type.

\* help: print this text

**# OPTIONS**

Most npm options are supported, but in camelCase rather than css-case. For example, instead of '--dry-run', use '--dryRun'.

Additionally:

\* **--quiet** will suppress the printing of package trees \* Instead of 'npm install <pkg>', use 'arborist reify --add=<pkg>'.

The '--add=<pkg>' option can be specified multiple times.

\* Instead of 'npm rm <pkg>', use 'arborist reify --rm=<pkg>'.

The '--rm=<pkg>' option can be specified multiple times.

\* Instead of 'npm update', use 'arborist reify --update-all'. \* 'npm audit fix' is 'arborist audit--fix'
