

## NAME

Mail::Message::Wrapper::SpamAssassin – Connect a Mail::Message with Mail::SpamAssassin

## INHERITANCE

```
Mail::Message::Wrapper::SpamAssassin
    is a Mail::SpamAssassin::Message
```

## SYNOPSIS

```
# WARNING: requires OLD SpamAssassin 2.x, not the new 3.x
# See Mail::Box::Search::SpamAssassin for the preferred interface
# However, it is possible to do:
```

```
my $msg      = ...;    # some Mail::Message object
my $sa       = Mail::Message::Wrapper::SpamAssassin->new($msg);
my $spam     = Mail::SpamAssassin->new;
my $status   = $spam->check($sa);

$msg->label(spam => 1) if $status->is_spam;
$status->rewrite_mail; # Adds spam lines to header
```

## DESCRIPTION

WARNING: This module only works with the old version of SpamAssassin: version 2.x. The newer 3.x releases have changed the way that messages are kept. Please contribute improved code.

The Mail::Message::Wrapper::SpamAssassin class —sorry for the long package name— is a wrapper around Mail::SpamAssassin::Message, which is an interface to the spam checking software of Mail::SpamAssassin.

## METHODS

Mail::Message::Wrapper::SpamAssassin->**new**(\$message,%options)

Creates a wrapper around the \$message. The already present fields from a previous run of Spam::Assassin (or probably fake lines) are removed first.

## SEE ALSO

This module is part of Mail-Box distribution version 3.009, built on August 18, 2020. Website: <http://perl.overmeer.net/CPAN/>
