

NAME

Sys::Virt::NWFilterBinding – Represent & manage a network filter binding

DESCRIPTION

The `Sys::Virt::NWFilterBinding` module represents a binding between a network filter and a network port device.

METHODS

`my $name = $binding->get_port_dev()`

Returns a string with the name of the network port device that is bound to

`my $name = $binding->get_filter_name()`

Returns a string with the name of the network filter that is bound to

`my $xml = $binding->get_xml_description()`

Returns an XML document containing a complete description of the network's configuration

`$binding->delete()`

Unbind the network port device from the filter

NETWORK FILTER BINDING CREATION CONSTANTS

When creating network filter bindings zero or more of the following constants may be used

`Sys::Virt::NWFilterBinding::CREATE_VALIDATE`

Validate the XML document against the XML schema
