

## NAME

*includeres* – filter to include resources in a PostScript document

## SYNOPSIS

***includeres*** < *document.ps* > *output.ps*

## DESCRIPTION

*Includeres* includes resources (fonts, procsets, patterns, files, etc) in place of *%%IncludeResource* comments in a PostScript document. The resources are searched for in the current directory and the system default directory under the resource name, and with an appropriate extension. The pipeline

```
extractres file.ps | includeres >out.ps
```

will move all resources appearing in a document to the document prologue, removing redundant copies. The output file can then be put through page re-arrangement filters such as *psnup* or *pstops* safely.

## FILES

/usr/lib/psutils - system resource directory.
