

NAME

nm-connection-editor – network connection editor for NetworkManager

SYNOPSIS

nm-connection-editor [*OPTIONS*]

DESCRIPTION

nm-connection-editor is a GTK-based application to add, remove, and modify network connections stored by NetworkManager. NetworkManager must be running for any network connections to be added, removed, or modified.

OPTIONS

-t, --type=<type>

Type of connection to create or show. Values are NetworkManager setting names, eg "802-3-ethernet", "802-11-wireless", "bridge", "bond", "infiniband", "vlan", etc. Does nothing if **--create** or **--show** is not given.

-s, --show

Expand or collapse the network list to highlight the network connection type given by **--type**.

-c, --create

Create a new connection of the type given by **--type** and allow the user to modify connection details.

-e, --edit=<uuid>

Show the network connection edit window for the connection of the given UUID.
