

NAME

User::Identity::Collection::Users – a collection of users

INHERITANCE

```
User::Identity::Collection::Users
  is a User::Identity::Collection
  is a User::Identity::Item
```

SYNOPSIS**DESCRIPTION**

The User::Identity::Collection::Users object maintains a set User::Identity objects, each describing a user.

Extends “DESCRIPTION” in User::Identity::Collection.

OVERLOADED

Extends “OVERLOADED” in User::Identity::Collection.

overload: @{}
 Inherited, see “OVERLOADED” in User::Identity::Collection

overload: **stringification**
 Inherited, see “OVERLOADED” in User::Identity::Collection

METHODS

Extends “METHODS” in User::Identity::Collection.

Constructors

Extends “Constructors” in User::Identity::Collection.

```
User::Identity::Collection::Users->new( [$name], %options )
  --Option      --Defined in      --Default
  description    User::Identity::Item      undef
  item_type      User::Identity::Collection  User::Identity
  name           User::Identity::Item      'people'
  parent         User::Identity::Item      undef
  roles          User::Identity::Collection undef

  description => STRING
  item_type => CLASS
  name => STRING
  parent => OBJECT
  roles => ROLE|ARRAY
```

Attributes

Extends “Attributes” in User::Identity::Collection.

\$obj->**description()**

Inherited, see “Attributes” in User::Identity::Item

\$obj->**itemType()**

Inherited, see “Attributes” in User::Identity::Collection

\$obj->**name**([\$newname])

Inherited, see “Attributes” in User::Identity::Item

\$obj->**roles()**

Inherited, see “Attributes” in User::Identity::Collection

Collections

Extends “Collections” in User::Identity::Collection.

\$obj->**add**(\$collection, \$role)

Inherited, see “Collections” in User::Identity::Item

`$obj->addCollection($object | <[$type], %options>)`

Inherited, see “Collections” in User::Identity::Item

`$obj->collection($name)`

Inherited, see “Collections” in User::Identity::Item

`$obj->parent([$parent])`

Inherited, see “Collections” in User::Identity::Item

`$obj->removeCollection($object|$name)`

Inherited, see “Collections” in User::Identity::Item

`$obj->type()`

User::Identity::Collection::Users->type()

Inherited, see “Collections” in User::Identity::Item

`$obj->user()`

Inherited, see “Collections” in User::Identity::Item

Maintaining roles

Extends “Maintaining roles” in User::Identity::Collection.

`$obj->addRole($role| <[$name],%options> | ARRAY)`

Inherited, see “Maintaining roles” in User::Identity::Collection

`$obj->removeRole($role|$name)`

Inherited, see “Maintaining roles” in User::Identity::Collection

`$obj->renameRole(<$role|$oldname>, $newname)`

Inherited, see “Maintaining roles” in User::Identity::Collection

`$obj->sorted()`

Inherited, see “Maintaining roles” in User::Identity::Collection

Searching

Extends “Searching” in User::Identity::Collection.

`$obj->find($name|CODE|undef)`

Inherited, see “Searching” in User::Identity::Collection

DIAGNOSTICS

Error: `$object` is not a collection.

The first argument is an object, but not of a class which extends User::Identity::Collection.

Error: Cannot create a `$type` to add this to my collection.

Some options are specified to create a `$type` object, which is native to this collection. However, for some reason this failed.

Error: Cannot load collection module for `$type` (`$class`).

Either the specified `$type` does not exist, or that module named `$class` returns compilation errors.

If the type as specified in the warning is not the name of a package, you specified a nickname which was not defined. Maybe you forgot the `'require'` the package which defines the nickname.

Error: Cannot rename `$name` into `$newname`: already exists

Error: Cannot rename `$name` into `$newname`: doesn't exist

Error: Creation of a collection via `$class` failed.

The `$class` did compile, but it was not possible to create an object of that class using the options you specified.

Error: Don't know what type of collection you want to add.

If you add a collection, it must either be a collection object or a list of options which can be used to create a collection object. In the latter case, the type of collection must be specified.

Warning: No collection \$name

The collection with \$name does not exist and can not be created.

Error: Wrong type of role for \$collection: requires a \$expect but got a \$type

Each \$collection groups sets of roles of one specific type (\$expect). You cannot add objects of a different \$type.
