

NAME

LWP::MemberMixin – Member access mixin class

SYNOPSIS

```
package Foo;  
use parent qw(LWP::MemberMixin);
```

DESCRIPTION

A mixin class to get methods that provide easy access to member variables in the `$_self`. Ideally there should be better Perl language support for this.

METHODS

There is only one method provided:

`_elem`

```
_elem($elem [, $val])
```

Internal method to get/set the value of member variable `$elem`. If `$val` is present it is used as the new value for the member variable. If it is not present the current value is not touched. In both cases the previous value of the member variable is returned.
