

**NAME**

Dpkg::Build::Info – handle build information

**DESCRIPTION**

The Dpkg::Build::Info module provides functions to handle the build information.

**FUNCTIONS**

`@envvars = get_build_env_allowed()`

Get an array with the allowed list of environment variables that can affect the build, but are still not privacy revealing.

`@envvars = get_build_env_whitelist()`

This is a deprecated alias for `get_build_env_allowed()`.

**CHANGES****Version 1.01 (dpkg 1.20.1)**

New function: `get_build_env_allowed()`.

Deprecated function: `get_build_env_whitelist()`.

**Version 1.00 (dpkg 1.18.14)**

Mark the module as public.
