

NAME

XtAppGetErrorDatabase, XtAppGetErrorDatabaseText – obtain error database

SYNTAX

```
#include <X11/Intrinsic.h>
```

```
XrmDatabase *XtAppGetErrorDatabase(XtAppContext app_context);
```

```
void XtAppGetErrorDatabaseText(XtAppContext app_context, const char *name, const char *type, const  
char *class, const char *defaultMsg, char *buffer_return, int nbytes, XrmDatabase database);
```

ARGUMENTS

<i>app_context</i>	Specifies the application context.
<i>buffer_return</i>	Specifies the buffer into which the error message is to be returned.
<i>class</i>	Specifies the resource class of the error message.
<i>database</i>	Specifies the name of the alternative database that is to be used or NULL if the application's database is to be used.
<i>defaultMsg</i>	Specifies the default message to use.
<i>name</i>	
<i>type</i>	Specifies the name and type that are concatenated to form the resource name of the error message.
<i>nbytes</i>	Specifies the size of the buffer in bytes.

DESCRIPTION

The **XtAppGetErrorDatabase** function returns the address of the error database. The Intrinsics do a lazy binding of the error database and do not merge in the database file until the first call to **XtAppGetErrorDatabaseText**.

The **XtAppGetErrorDatabaseText** returns the appropriate message from the error database or returns the specified default message if one is not found in the error database.
