

**NAME**

conj, conjf, conjl – calculate the complex conjugate

**LIBRARY**

Math library (*libm*, *-lm*)

**SYNOPSIS**

```
#include <complex.h>
```

```
double complex conj(double complex z);
```

```
float complex conjf(float complex z);
```

```
long double complex conjl(long double complex z);
```

**DESCRIPTION**

These functions return the complex conjugate value of *z*. That is the value obtained by changing the sign of the imaginary part.

One has:

```
cabs(z) = csqrt(z * conj(z))
```

**VERSIONS**

These functions were added in glibc 2.1.

**ATTRIBUTES**

For an explanation of the terms used in this section, see **attributes(7)**.

Interface	Attribute	Value
conj(), conjf(), conjl()	Thread safety	MT-Safe

**STANDARDS**

C99, POSIX.1-2001, POSIX.1-2008.
