

NAME

thin_ls - List thin volumes within a pool.

SYNOPSIS

thin_ls [*options*] {device|file}

DESCRIPTION

thin_ls displays information about thin volumes in a pool. Pass the metadata device on the command line, not the pool device.

This tool cannot be run on live metadata unless the **--metadata-snap** option is used.

OPTIONS**-h, --help**

Print help and exit.

-V, --version

Print version information and exit.

-o, --format

Give a comma separated list of fields to be output.

Valid fields are:

DEV, MAPPED_BLOCKS, EXCLUSIVE_BLOCKS, SHARED_BLOCKS, MAPPED_SECTORS,
EXCLUSIVE_SECTORS, SHARED_SECTORS, MAPPED_BYTES, EXCLUSIVE_BYTES,
SHARED_BYTES, MAPPED, EXCLUSIVE, SHARED, TRANSACTION, CREATE_TIME,
SNAP_TIME

--no-headers

Don't output headers.

-m, --metadata-snap

Use metadata snapshot.

If you want to get information out of a live pool then you will need to take a metadata snapshot and use this switch.
