

## NAME

**lb\_clean** – Clean build directory

## SYNOPSIS

**lb clean** [*OPTIONS*]

## DESCRIPTION

**lb clean** is a high-level command (porcelain) of *live-build(7)*, the Debian Live tool suite.

**lb clean** is responsible for cleaning up after a system is built. It removes the build directories, and removes some other files including stage files, and any detritus left behind by other live-build commands.

## OPTIONS

In addition to its specific options **lb clean** understands all generic live-build options. See *live-build(7)* for a complete list of all generic live-build options.

**--all**

removes chroot, binary, stage, and source. The cache directory is kept. This is the default operation and will be performed if no argument is given.

**--cache**

removes the cache directories.

**--chroot**

unmounts and removes the chroot directory.

**--binary**

removes all binary related caches, files, directories, and stages files.

**--purge**

removes everything, including all caches. The config directory is kept.

**--remove**

removes everything, including package cache but not stage cache. The config directory is kept.

**--stage**

removes all stage files.

**--source**

removes all source related caches, files, directories, and stage files.

## FILES

**auto/clean**

## SEE ALSO

*live-build(7)*

This program is a part of live-build.

## HOMEPAGE

More information about live-build and the Debian Live project can be found on the homepage at [<https://wiki.debian.org/DebianLive>](https://wiki.debian.org/DebianLive).

## BUGS

Bugs can be reported by submitting a bug report for the live-build package in the Bug Tracking System at [<http://bugs.debian.org/>](http://bugs.debian.org/) or by writing a mail to the Debian Live mailing list at [<debian-live@lists.debian.org>](mailto:debian-live@lists.debian.org).

**AUTHOR**

live-build was originally written by Daniel Baumann <[mail@daniel-baumann.ch](mailto:mail@daniel-baumann.ch)>. Since 2016 development has been continued by the Debian Live team.
