

NAME

X11::Protocol::Connection::UNIXFH – Perl module for FileHandle-based Unix-domain X11 connections

SYNOPSIS

```
use X11::Protocol;  
use X11::Protocol::Connection::UNIXFH;  
$conn = X11::Protocol::Connection::UNIXFH  
    ->open($host, $display_number);  
$x = X11::Protocol->new($conn);
```

DESCRIPTION

This module is used by X11::Protocol to establish a connection and communicate with a server over a local Unix-domain socket connection, using the FileHandle module. The host argument is ignored.

AUTHOR

Stephen McCamant <SMCCAM@cpan.org>.
