

NAME

XtAppAddWorkProc, XtRemoveWorkProc – Add and remove background processing procedures

SYNTAX

```
#include <X11/Intrinsic.h>
```

```
XtWorkProcId XtAppAddWorkProc(XtAppContext app_context, XtWorkProc proc, XtPointer  
                               client_data);
```

```
void XtRemoveWorkProc(XtWorkProcId id);
```

ARGUMENTS

<i>app_context</i>	Specifies the application context that identifies the application.
<i>client_data</i>	Specifies the argument that is to be passed to the specified procedure when it is called.
<i>proc</i>	Specifies the procedure that is to be called.
<i>id</i>	Specifies which work procedure to remove.

DESCRIPTION

The **XtAppAddWorkProc** function adds the specified work procedure for the application identified by *app_context*.

The **XtRemoveWorkProc** function explicitly removes the specified background work procedure.
