

NAME

User::Identity::Collection::Emails – a collection of email roles

INHERITANCE

```
User::Identity::Collection::Emails
  is a User::Identity::Collection
  is a User::Identity::Item
```

SYNOPSIS**DESCRIPTION**

The `User::Identity::Collection::Emails` object maintains a set `Mail::Identity` objects, each describing a role which the user has in e-mail traffic.

Extends “DESCRIPTION” in `User::Identity::Collection`.

OVERLOADED

Extends “OVERLOADED” in `User::Identity::Collection`.

overload: @{}
 Inherited, see “OVERLOADED” in `User::Identity::Collection`

overload: **stringification**
 Inherited, see “OVERLOADED” in `User::Identity::Collection`

METHODS

Extends “METHODS” in `User::Identity::Collection`.

Constructors

Extends “Constructors” in `User::Identity::Collection`.

```
User::Identity::Collection::Emails->new( [$name], %options )
  -Option      --Defined in      --Default
  description   User::Identity::Item      undef
  item_type     User::Identity::Collection Mail::Identity
  name          User::Identity::Item      'emails'
  parent        User::Identity::Item      undef
  roles         User::Identity::Collection undef

  description => STRING
  item_type   => CLASS
  name        => STRING
  parent      => OBJECT
  roles       => ROLE|ARRAY
```

Attributes

Extends “Attributes” in `User::Identity::Collection`.

`$obj->description()`

Inherited, see “Attributes” in `User::Identity::Item`

`$obj->itemType()`

Inherited, see “Attributes” in `User::Identity::Collection`

`$obj->name([$newname])`

Inherited, see “Attributes” in `User::Identity::Item`

`$obj->roles()`

Inherited, see “Attributes” in `User::Identity::Collection`

Collections

Extends “Collections” in `User::Identity::Collection`.

`$obj->add($collection, $role)`

Inherited, see “Collections” in `User::Identity::Item`

`$obj->addCollection($object | <[$type], %options>)`

Inherited, see “Collections” in User::Identity::Item

`$obj->collection($name)`

Inherited, see “Collections” in User::Identity::Item

`$obj->parent([$parent])`

Inherited, see “Collections” in User::Identity::Item

`$obj->removeCollection($object|$name)`

Inherited, see “Collections” in User::Identity::Item

`$obj->type()`

User::Identity::Collection::Emails->type()

Inherited, see “Collections” in User::Identity::Item

`$obj->user()`

Inherited, see “Collections” in User::Identity::Item

Maintaining roles

Extends “Maintaining roles” in User::Identity::Collection.

`$obj->addRole($role| <[$name],%options> | ARRAY)`

Inherited, see “Maintaining roles” in User::Identity::Collection

`$obj->removeRole($role|$name)`

Inherited, see “Maintaining roles” in User::Identity::Collection

`$obj->renameRole(<$role|$oldname>, $newname)`

Inherited, see “Maintaining roles” in User::Identity::Collection

`$obj->sorted()`

Inherited, see “Maintaining roles” in User::Identity::Collection

Searching

Extends “Searching” in User::Identity::Collection.

`$obj->find($name|CODE|undef)`

Inherited, see “Searching” in User::Identity::Collection

DIAGNOSTICS

Error: `$object` is not a collection.

The first argument is an object, but not of a class which extends User::Identity::Collection.

Error: Cannot create a `$type` to add this to my collection.

Some options are specified to create a `$type` object, which is native to this collection. However, for some reason this failed.

Error: Cannot load collection module for `$type` (`$class`).

Either the specified `$type` does not exist, or that module named `$class` returns compilation errors.

If the type as specified in the warning is not the name of a package, you specified a nickname which was not defined. Maybe you forgot the `'require'` the package which defines the nickname.

Error: Cannot rename `$name` into `$newname`: already exists

Error: Cannot rename `$name` into `$newname`: doesn't exist

Error: Creation of a collection via `$class` failed.

The `$class` did compile, but it was not possible to create an object of that class using the options you specified.

Error: Don't know what type of collection you want to add.

If you add a collection, it must either be a collection object or a list of options which can be used to create a collection object. In the latter case, the type of collection must be specified.

Warning: No collection \$name

The collection with \$name does not exist and can not be created.

Error: Wrong type of role for \$collection: requires a \$expect but got a \$type

Each \$collection groups sets of roles of one specific type (\$expect). You cannot add objects of a different \$type.
