

NAME

swtpm-localca.options – Options file for swtpm-localca

DESCRIPTION

The file */etc/swtpm-localca.options* contains command line options to pass to the *swtpm_cert* program and should hold options that apply to the creation of all TPM Endorsement Key (EK) and platform certificates.

Users may write their own options into *\${XDG_CONFIG_HOME}/swtpm-localca.options* or if *XDG_CONFIG_HOME* is not set it may be in *\${HOME}/.config/swtpm-localca.options*.

EXAMPLE

An example *swtpm-localca.options* file may look as follows:

```
--platform-manufacturer Fedora
--platform-version 2.1
--platform-model QEMU
```
