

NAME

git-verify-commit – Check the GPG signature of commits

SYNOPSIS

git verify-commit <commit>...

DESCRIPTION

Validates the GPG signature created by *git commit -S*.

OPTIONS

—raw

Print the raw gpg status output to standard error instead of the normal human-readable output.

—v, —verbose

Print the contents of the commit object before validating it.

<commit>...

SHA-1 identifiers of Git commit objects.
