

**NAME**

kvm-spice, qemu-system-x86\_64-spice – compatibility names for qemu-system-x86\_64

**DESCRIPTION**

The two names are aliases for **qemu-system-x86\_64**, where kvm-spice enables kvm native hardware mode by default. These names are kept for backward compatibility with old package, when spice-enabled qemu were packaged separately. Now main qemu-system has spice functionality built in. Please use **qemu-system-x86\_64** instead of the old compat names.

**SEE ALSO**

**qemu-system-x86\_64(1)**.
