

NAME

pnmtosgi - convert a portable anymap to a SGI image file

SYNOPSIS

pnmtosgi [-**verbatim**|-**rle**] [-**imagename** *Name*] [**pnmfile**]

DESCRIPTION

Reads a portable anymap as input. Produces an SGI image file as output. The SGI image will be 2-dimensional (1 channel) for PBM and PGM input, and 3-dimensional (3 channels) for PPM.

OPTIONS**-verbatim**

Write an uncompressed file.

-rle (default)

Write a compressed (run length encoded) file.

-imagename name

Write the string "name" into the imagename field of the header. The name string is limited to 79 characters. If no name is given, pnmtosgi writes "no name" into this field.

BUGS

Probably.
