

NAME

shells – pathnames of valid login shells

DESCRIPTION

/etc/shells is a text file which contains the full pathnames of valid login shells. This file is consulted by **chsh**(1) and available to be queried by other programs.

Be aware that there are programs which consult this file to find out if a user is a normal user; for example, FTP daemons traditionally disallow access to users with shells not included in this file.

FILES

/etc/shells

EXAMPLES

/etc/shells may contain the following paths:

/bin/sh
/bin/bash
/bin/csh

SEE ALSO

chsh(1), **getusershell**(3), **pam_shells**(8)
