

NAME

gcore – Generate core files for running processes

SYNOPSIS

gcore [-a] [-o *filename*] *pid[s]*

DESCRIPTION

gcore generates a core file for the process(es) specified by process IDs, *pid[s]*. By default, each core file is written to *core.pid*, in the current directory.

–a (Linux only) ignore /proc/PID/coredump_filter and also dump memory mappings marked with the 'VM_DONTDUMP' flag. See info node Core File Generation for longer explanation.

–o *filename*

write core file to *filename* if one PID, or *filename.pid* if multiple PIDs, instead of default *core.pid*
