

NAME

env – run a program in a modified environment

SYNOPSIS

env [*OPTION*]... [-] [*NAME=VALUE*]... [*COMMAND* [*ARG*]...]

DESCRIPTION

Set each *NAME* to *VALUE* in the environment and run *COMMAND*.

Mandatory arguments to long options are mandatory for short options too.

-i, --ignore-environment

start with an empty environment

-0, --null

end each output line with NUL, not newline

-u, --unset=NAME

remove variable from the environment

-C, --chdir=DIR

change working directory to *DIR*

-S, --split-string=S

process and split *S* into separate arguments; used to pass multiple arguments on shebang lines

--block-signal[=SIG]

block delivery of *SIG* signal(s) to *COMMAND*

--default-signal[=SIG]

reset handling of *SIG* signal(s) to the default

--ignore-signal[=SIG]

set handling of *SIG* signals(s) to do nothing

--list-signal-handling

list non default signal handling to stderr

-v, --debug

print verbose information for each processing step

--help display this help and exit

--version

output version information and exit

A mere *-* implies **-i**. If no *COMMAND*, print the resulting environment.

SIG may be a signal name like 'PIPE', or a signal number like '13'. Without *SIG*, all known signals are included. Multiple signals can be comma-separated.

OPTIONS

-S/--split-string usage in scripts

The **-S** option allows specifying multiple parameters in a script. Running a script named **1.pl** containing the following first line:

```
#!/usr/bin/env -S perl -w -T
```

...

Will execute **perl -w -T 1.pl**.

Without the '**-S**' parameter the script will likely fail with:

```
/usr/bin/env: 'perl -w -T': No such file or directory
```

See the full documentation for more details.

--default-signal[=SIG] usage

This option allows setting a signal handler to its default action, which is not possible using the traditional shell trap command. The following example ensures that seq will be terminated by SIGPIPE no matter how this signal is being handled in the process invoking the command.

```
sh -c 'env --default-signal=PIPE seq inf | head -n1'
```

NOTES

POSIX's exec(2) pages says:

"many existing applications wrongly assume that they start with certain signals set to the default action and/or unblocked.... Therefore, it is best not to block or ignore signals across execs without explicit reason to do so, and especially not to block signals across execs of arbitrary (not closely cooperating) programs."
