

**NAME****npm-profile** – Change settings on your registry profile**Synopsis**

```

npm profile get [--json|--parseable] [<property>]
npm profile set [--json|--parseable] <property> <value>
npm profile set password
npm profile enable-2fa [auth-and-writes|auth-only]
npm profile disable-2fa

```

Note: This command is unaware of workspaces.

**Description**

Change your profile information on the registry. Note that this command depends on the registry implementation, so third-party registries may not support this interface.

- **npm profile get [<property>]**: Display all of the properties of your profile, or one or more specific properties. It looks like:

```

+-----+-----+
| name      | example      |
+-----+-----+
| email      | me@example.com (verified) |
+-----+-----+
| two factor auth | auth-and-writes |
+-----+-----+
| fullname    | Example User    |
+-----+-----+
| homepage     |                  |
+-----+-----+
| freenode     |                  |
+-----+-----+
| twitter      |                  |
+-----+-----+
| github       |                  |
+-----+-----+
| created      | 2015-02-26T01:38:35.892Z |
+-----+-----+
| updated      | 2017-10-02T21:29:45.922Z |
+-----+-----+

```

- **npm profile set <property> <value>**: Set the value of a profile property. You can set the following properties this way: email, fullname, homepage, freenode, twitter, github
- **npm profile set password**: Change your password. This is interactive, you'll be prompted for your current password and a new password. You'll also be prompted for an OTP if you have two-factor authentication enabled.
- **npm profile enable-2fa [auth-and-writes|auth-only]**: Enables two-factor authentication. Defaults to **auth-and-writes** mode. Modes are:
  - **auth-only**: Require an OTP when logging in or making changes to your account's authentication. The OTP will be required on both the website and the command line.
  - **auth-and-writes**: Requires an OTP at all the times **auth-only** does, and also requires one when publishing a module, setting the **latest** dist-tag, or changing access via **npm access** and **npm owner**.
- **npm profile disable-2fa**: Disables two-factor authentication.

**Details**

Some of these commands may not be available on non npmjs.com registries.

**Configuration**

<!-- AUTOGENERATED CONFIG DESCRIPTIONS START --> <!-- automatically generated, do not edit manually --> <!-- see lib/utils/config/definitions.js -->

**registry**

- Default: "https://registry.npmjs.org/"
- Type: URL

The base URL of the npm registry. <!-- automatically generated, do not edit manually --> <!-- see lib/utils/config/definitions.js -->

**json**

- Default: false
- Type: Boolean

Whether or not to output JSON data, rather than the normal output.

- In **npm pkg set** it enables parsing set values with `JSON.parse()` before saving them to your **package.json**.

Not supported by all npm commands. <!-- automatically generated, do not edit manually --> <!-- see lib/utils/config/definitions.js -->

**parseable**

- Default: false
- Type: Boolean

Output parseable results from commands that write to standard output. For **npm search**, this will be tab-separated table format. <!-- automatically generated, do not edit manually --> <!-- see lib/utils/config/definitions.js -->

**otp**

- Default: null
- Type: null or String

This is a one-time password from a two-factor authenticator. It's needed when publishing or changing package permissions with **npm access**.

If not set, and a registry response fails with a challenge for a one-time password, npm will prompt on the command line for one. <!-- automatically generated, do not edit manually --> <!-- see lib/utils/config/definitions.js -->

<!-- AUTOGENERATED CONFIG DESCRIPTIONS END -->
