

NAME

gemtopnm - convert a GEM .img file into a portable anymap

SYNOPSIS

gemtopnm [-d] [*gemfile*]

DESCRIPTION

Reads a GEM .img file, either the one plane (black/white) or four plane (16 color) variety, as input. Reads from stdin if input file is omitted. Produces a PBM or PPM file as output, depending on whether the input is one or four plane.

OPTIONS

-d Produce output describing the contents of the .img file.

SEE ALSO

pbmtogem(1), **pnm**(5)
