

NAME

PCRE2 - Perl-compatible regular expressions (revised API)

SYNOPSIS

```
#include <pcre2.h>

void pcre2_maketables_free(pcre2_general_context *gcontext,
    const uint8_t *tables);
```

DESCRIPTION

This function discards a set of character tables that were created by a call to **pcre2_maketables()**.

The *gcontext* parameter should match what was used in that call to account for any custom allocators that might be in use; if it is NULL the system **free()** is used.

There is a complete description of the PCRE2 native API in the **pcre2api** page.
