

NAME

uz – gunzips and extracts a gzip'd tar'd archive

SYNOPSIS

uz *file*

DESCRIPTION

uz extracts a gzip'd tar'd archive, that is a **tar**(1) archive compressed with the **gzip**(1) utility. It is not strictly necessary on Debian GNU/Linux, because the GNU **tar**(1) program provides the same capability with the command

tar -xzf *file*

but this utility is provided in the mtools package for other platforms and is retained here for completeness.

AUTHOR

Robert King (Robert.King@mailbox.gu.edu.au) wrote this page for the *Debian/GNU* mtools package.
