

NAME

getcap – examine file capabilities

SYNOPSIS

getcap [-v] [-n] [-r] [-h] *filename* [...]

DESCRIPTION

getcap displays the name and capabilities of each specified file.

OPTIONS

- h** prints quick usage.
- n** prints any non-zero user namespace root user ID value found to be associated with a file's capabilities.
- r** enables recursive search.
- v** display all searched entries, even if they have no file-capabilities.

filename

One file per line.

REPORTING BUGS

Please report bugs via:
