

**NAME**

sbsign - UEFI secure boot signing tool

**SYNOPSIS**

**sbsign** [*options*] *--key* <keyfile> *--cert* <certfile> <efi-boot-image>

**DESCRIPTION**

Sign an EFI boot image for use with secure boot.

**OPTIONS**

- engine** <eng>  
use the specified engine to load the key
- key** <keyfile>  
signing key (PEM-encoded RSA private key)
- cert** <certfile>  
certificate (x509 certificate)
- addcert** <addcertfile> additional intermediate certificates in a file
- detached**  
write a detached signature, instead of a signed binary
- output** <file>  
write signed data to <file> (default <efi-boot-image>.signed, or <efi-boot-image>.pk7 for detached signatures)
