

**NAME**

git-check-mailmap – Show canonical names and email addresses of contacts

**SYNOPSIS**

*git check-mailmap* [<options>] <contact>...

**DESCRIPTION**

For each “Name <user@host>” or “<user@host>” from the command-line or standard input (when using **—stdin**), look up the person’s canonical name and email address (see "Mapping Authors" below). If found, print them; otherwise print the input as-is.

**OPTIONS**

**—stdin**

Read contacts, one per line, from the standard input after exhausting contacts provided on the command-line.

**OUTPUT**

For each contact, a single line is output, terminated by a newline. If the name is provided or known to the *mailmap*, “Name <user@host>” is printed; otherwise only “<user@host>” is printed.

**CONFIGURATION**

See **mailmap.file** and **mailmap.blob** in **git-config**(1) for how to specify a custom **.mailmap** target file or object.

**MAPPING AUTHORS**

See **gitmailmap**(5).

**GIT**

Part of the **git**(1) suite
