NAME

showconsolefont – Show the current EGA/VGA console screen font

SYNOPSIS

DESCRIPTION

The **showconsole ont** command outputs the current console font to stdout. The option $-\mathbf{v}$ prints additional information, while the option $-\mathbf{V}$ prints the program version number. The option $-\mathbf{i}$ doesn't print out the font table, just shows ROWSxCOLSxCOUNT and exits. On Linux 2.6.1 and later, the option $-\mathbf{C}$ allows one to indicate the console involved. Its argument is a pathname.
