# **NAME**

xzless, lzless - view xz or lzma compressed (text) files

# **SYNOPSIS**

```
xzless [file...] lzless [file...]
```

# **DESCRIPTION**

**xzless** is a filter that displays text from compressed files to a terminal. It works on files compressed with **xz**(1) or **lzma**(1). If no files are gi ven, **xzless** reads from standard input.

**xzless** uses **less**(1) to present its output. Unlike **xzmore**, its choice of pager cannot be altered by setting an environment variable. Commands are based on both**mor**  $\mathbf{e}(1)$  and  $\mathbf{vi}(1)$  and allow back and forth movement and searching. See the **less**(1) manual for more information.

The command named lzless is provided for backward compatibility with LZMA Utils.

# **ENVIRONMENT**

#### LESSMETACHARS

A list of characters special to the shell. Set by xzless unless it is already set in the environment.

#### LESSOPEN

Set to a command line to invoke the xz(1) decompressor for preprocessing the input files to less(1).

# **SEE ALSO**
