## **NAME**

PCRE2 - Perl-compatible regular expressions (revised API)

## **SYNOPSIS**

#include <pcre2.h>
void pcre2\_substring\_list\_free(PCRE2\_SPTR \*list);

## DESCRIPTION

This is a convenience function for freeing the store obtained by a previous call to **pcre2sub-string\_list\_get()**. Its only argument is a pointer to the list of string pointers. If the argument is NULL, the function returns immediately, without doing anything.

There is a complete description of the PCRE2 native API in the **pcre2api** page and a description of the POSIX API in the **pcre2posix** page.
