NAME

sin, sinf, sinl – sine function

LIBRARY

Math library (libm, -lm)

SYNOPSIS

```
#include <math.h>
double sin(double x);
float sinf(float x);
long double sinl(long double x);
```

Feature Test Macro Requirements for glibc (see **feature_test_macros**(7)):

DESCRIPTION

These functions return the sine of x, where x is given in radians.

RETURN VALUE

On success, these functions return the sine of x.

If x is a NaN, a NaN is returned.

If x is positive infinity or negative infinity, a domain error occurs, and a NaN is returned.

ERRORS

See **math_error**(7) for information on how to determine whether an error has occurred when calling these functions.

The following errors can occur:

Domain error: x is an infinity

errno is set to **EDOM** (but see BUGS). An invalid floating-point exception (**FE_INVALID**) is raised.

ATTRIBUTES

For an explanation of the terms used in this section, see **attributes**(7).

| Interface | Attribute | Value |
|-----------------------|---------------|---------|
| sin(), sinf(), sinl() | Thread safety | MT-Safe |

STANDARDS

C99, POSIX.1-2001, POSIX.1-2008.

The variant returning double also conforms to SVr4, 4.3BSD.

BUGS

Before glibc 2.10, the glibc implementation did not set errno to **EDOM** when a domain error occurred.
