## **NAME**

gvfsd-metadata - Metadata daemon for gvfs

# **SYNOPSIS**

gvfs-metadata [OPTION...]

## DESCRIPTION

**gvfsd-metadata** is a daemon acting as a write serialiser to the internal gvfs metadata storage. It is autostarted by GIO clients when they make metadata changes. Read operations are done by client-side GIO code directly, and don't require the daemon to be running.

The gvfs metadata capabilities are used by the nautilus file manager, for example.

# **OPTIONS**

# -h, --help

Prints a short help text and exits.

#### --version

Shows the version number and exits.

## -r, --replace

Replace the currently running instance.

## **EXIT STATUS**

On success 0 is returned, a non-zero failure code otherwise.

# **FILES**

# **\$XDG\_DATA\_HOME**/gvfs-metadata

The directory where the gvfs metadata database files are stored

## **SEE ALSO**

gvfs(7), nautilus(1)

gvfs 1
