#### **NAME**

pmap - report memory map of a process

#### **SYNOPSIS**

pmap [options] pid [...]

#### **DESCRIPTION**

The **pmap** command reports the memory map of a process or processes.

### **OPTIONS**

#### -x, --extended

Show the extended format.

#### -d, --device

Show the device format.

# -q, --quiet

Do not display some header or footer lines.

### -A, --range low,high

Limit results to the given range to *low* and *high* address range. Notice that the low and high arguments are single string separated with comma.

- -X Show even more details than the -x option. WARNING: format changes according to /proc/PID/smaps
- -XX Show everything the kernel provides

# -p, --show-path

Show full path to files in the mapping column

## -c, --read-rc

Read the default configuration

#### -C, --read-rc-from file

Read the configuration from file

#### -n, --create-rc

Create new default configuration

#### -N, --create-rc-to file

Create new configuration to file

#### -h, --help

Display help text and exit.

## -V, --version

Display version information and exit.

#### **EXIT STATUS**

0 Success.

**1** Failure.

42 Did not find all processes asked for.

#### **SEE ALSO**

ps(1), pgrep(1)

### **STANDARDS**

No standards apply, but **pmap** looks an awful lot like a SunOS command.

## **REPORTING BUGS**

Please send bug reports to \( \rho \text{procps@freelists.org} \)
