Net::DBus::Binding::Message::MethodCall(3pm)ributed Perl DocuNictntDBus::Binding::Message::MethodCall(3pm)

NAME

Net::DBus::Binding::Message::MethodCall - a message encoding a method call

DESCRIPTION

This module is part of the low-level DBus binding APIs, and should not be used by application code. No guarantees are made about APIs under the Net::DBus::Binding:: namespace being stable across releases

This module provides a convenience constructor for creating a message representing a method call.

METHODS

my \$call = Net::DBus::Binding::Message::MethodCall->new(service_name => \$service,
object_path => \$object, interface => \$interface, method_name => \$name);

Create a message representing a call on the object located at the path object_path within the client owning the well-known name given by service_name. The method to be invoked has the name method_name within the interface specified by the interface parameter.
